

AI-ASSISTANT CODING - PROJECT

Canteen Connect

TEAM DETAILS

S.Arthi-2303a51595

Project Guide : Salauddin Sir

Introduction of project

Canteen Connect is a digital platform that simplifies food ordering in college and workplace canteens. It helps users browse menus, place orders, and make payments online, reducing long queues and waiting time. The system improves order accuracy and allows real-time tracking, while helping canteen staff manage orders efficiently.

Objectives – Canteen Connect

- To reduce waiting time and eliminate long queues in canteens
- To provide easy online food ordering for users
- To improve order accuracy and minimize errors
- To enable real-time order tracking and notifications
- To help canteen staff manage orders efficiently
- To create a smooth and user-friendly experience for both customers and owner

Stakeholders

Customers (Students/Employees):

Browse menu, place orders, make payments, and track order status orders.

Admin:

Manage menu items, update prices, handle orders, and control the overall system

Programming Languages, Tools, and Software

- **Programming Languages:**
JavaScript ,HTML, CSS
- **Technologies:**
Node.js ,Express.js ,Cors
- **Database:**
SON-based Local Database
- **Tools & Software:**
Visual Studio Code,
Git & GitHub,
Antigravity

Prompts

- build a frontend and backend project canteen connect project where there are two separate modules for canteen owner and student. where canteen owner can add menu and edit menu and he can see the orders from students and if order making is completed he can mark as preparing completed and he can see the timing the students will come take the order according to that they can manage and before handovering the order the owner should have option to verify id of the student order after payment confirmation the student gets a unique id. in student module the student can see the menu and he can be able to add to cart or buy it. give quantity option and show total amount and the student should have option to select time whenever he will go to canteen and take it. give option for online payment. after payment only the order should be confirmed and he will receive unique id. he can see what was the orders made. the owner after giving the order he can just mark as handover completed.
- make option to give name of student while sign up and give search option for menu. for owner give search option for menu and search for ordered person and give verify option in the order request itself.

Prompts

- after completing handover keep handover completed for that day and remove completely after that day ends and make owner to see the total payments list and make the pages more attractive to see.
- categorize handovered orders,mark prepared orders.
- give option for dark theme and light theme.
- give option for students to order items without adding into cart also
- the money the owner earned on that day will separatly upadated
